

# KGS Migration4ArchiveLink

# KGS

Document Integration for SAP®

## FEATURES

- Controlled management of document and data migrations for SAP archives
- Full access to documents throughout the duration of the migration through proxy server functionality
- Transparent document access for the end user; no impact on business processes
- Fully automated documentation of migration ensures conformity to generally accepted accounting principles
- Proactive monitoring with e-mail notification of errors
- Administration via web client
- Fully automatic restart following a system interruption
- Verification option by comparison of samples
- Highly parallel execution of the migration process; interactive control of the migration process while migration in progress
- SAP security support to ensure secure communication with legacy archive system
- Zero performance impact on production SAP system

## BENEFITS

- Immediate use of the target archive and seamless access to legacy archive
- Intuitive control and configuration
- Complete traceability of the migration process down to document-level
- Full migration status reports at any time
- Minimization of migration risks throughout
- Fully automated documentation of the migration process
- Support of SAP work items & barcode documents
- Compatible with all SAP ArchiveLink™-certified archives
- Minimal administrative effort

Achieve more with KGS software.

**KGS**

Document Integration for SAP®

→ **KGS Migration4ArchiveLink** is software designed for easy and controlled document data migrations for SAP archives. Document migrations are a necessity since the introduction of electronic archiving. In all situations where it becomes necessary to switch storage systems / media or when entire archive systems have to be replaced, a document and data migration is required.

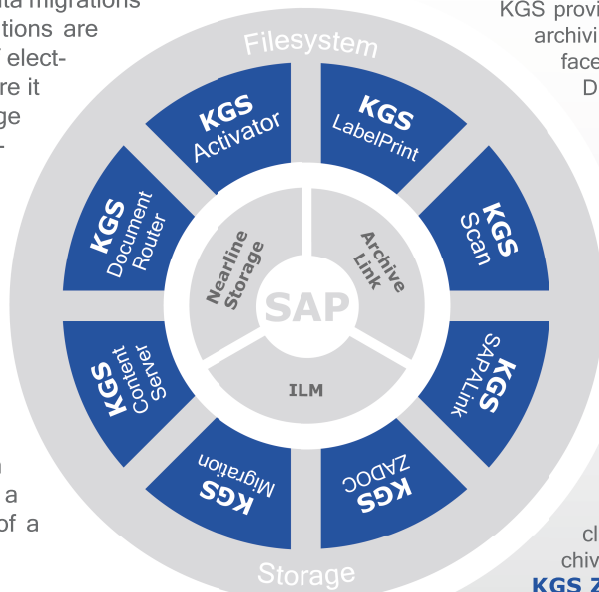

KGS Migration4ArchiveLink can be used to thoroughly monitor legal requirements during archive transfers, and provide evidence that all objects have been transferred correctly. With KGS Migration4Archive Link, the migration can be comfortably carried out through a web client, controlling all aspects of a migration project.

The use of KGS Migration4ArchiveLink is independent of the existing archive solution - every SAP ArchiveLink™-enabled archive can be used as a source and target system. The solution allows switching to the new archive right away, at the very beginning of the migration project. Due to the special proxy server functionality of the KGS migration software, the documents are accessible throughout the migration process, regardless of whether they have been transferred or are still in the old archive.

The KGS Migration4ArchiveLink server manages the document access and the migration independently from any underlying technology and is completely transparent to the user. All SAP ArchiveLink based business processes continue to function as before, without change. The migration can be carried out easily, quickly and with minimal administrative effort.

**KGS product suite:**

KGS provides a wide product range for document archiving in SAP. **KGS SAPALink** Interface for seamless SAP integration for any DMS, Archive or Storage Solution, **KGS Activator** for transfers of external documents and data in SAP, **KGS LabelPrint**, a barcode solution for document entry processes, **KGS ContentServer4Storage** as a high performance SAP archiving solution, **KGS DocumentRouter** for the harnessing of documents of different sources in SAP, **KGS Migration4ArchiveLink** for the document migration as well as pioneering solutions for the binding of ILM and Nearline Storage with SAP HANA. New in the product suite are: **KGS Scan**, the performant scan client with direct control and storage / archiving of scanned documents from SAP and **KGS ZADOC**, the universal web-based solution that enables users to tap into NON-SAP through SAP.

**About KGS:**

KGS GmbH & Co. KG Software stands for the highest competence in the field of SAP archiving and document management. Top businesses world-wide rely on KGS solutions when it comes to SAP archiving. KGS products range from high performance SAP archives, to ILM and document capturing, up to fully automated SAP archiving migrations. KGS provides consistent, high-quality and release stable interfaces, and professional consulting services regarding technical integration to third-party software providers. Since 2005, KGS has been SAP's world-wide outsourcing partner for SAP ArchiveLink™ and ILM interface certification; as a global SAP Value Add Solutions Partner, the international top customer base extends over the USA, Canada, Africa, Australia, Germany, Austria, Switzerland to almost all other European countries.
