About us

We offer our customers cloud services for legally compliant archiving of data and documents.

The connection of SAP systems on premise, as well as RISE with SAP and GROW with SAP systems to the arcana cloud archive is standardized and simple.

Background

- Experienced team with extensive archiving expertise, in the business since the early 1990s.
- Innovative implementation of a legally secure archive in the cloud and for the cloud (truly cloud native – compare us to other vendors!).
- Use of standardized interfaces for easy integration into leading systems.
- Easy to order via the Azure Marketplace.
- Integration into leading applications can be accomplished without soliciting help from applications vendors by using the their CMIS API.

Technology 1

- Azure Container Apps
 - Elimination of administration efforts for the runtime environment
 - Automatic scaling
 - Distribution in different zones
 - Very high level of fail-safety
- Archive logic completely implemented in JAVA
 - Runs on different Hyperscaler platforms (Microsoft Azure, AWS, Google), first deployment on Microsoft Azure
- Supports the archive-optimized Hyperscaler storage

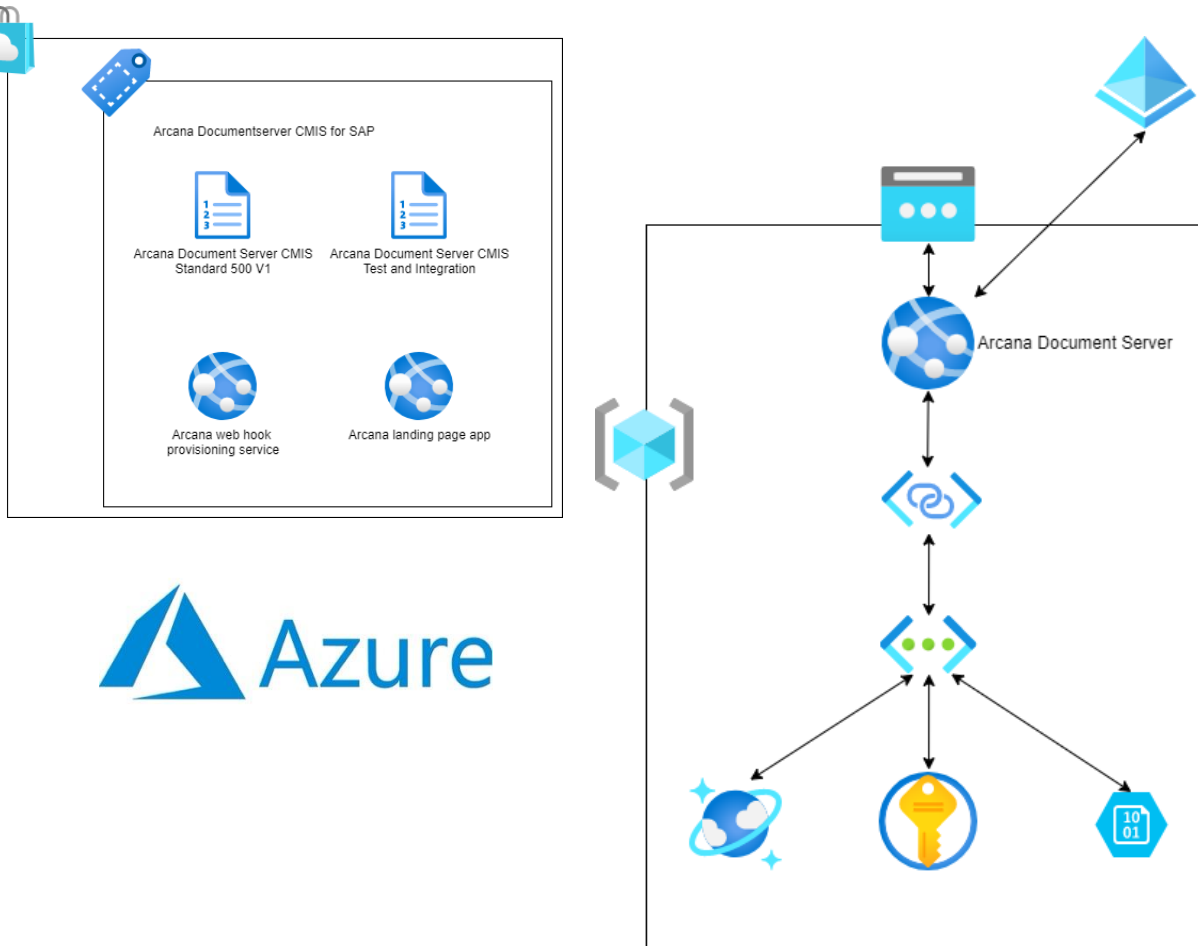

Technology 2

- Security aspects of the architecture
 - Use of private networks for communication between components
 - Use of certificate services (customer keys can also be integrated – “bring your own key”)
 - Encrypted communication between application (SAP) and archive
 - Encrypted data storage - if desired, encrypted using customer-owned keys
 - Utilization of a virus scanners before archiving the data is available
 - Access control via Microsoft AD (Active Directory)

Architecture

- All archive instances are provisioned via the Azure Marketplace
- Management of the archive via the Azure Portal
- Each subscriber to our products receives its own Azure Blob Store and Azure Cosmos DB instance

Arcana Document Server (Vorschau)

arcana solutions GmbH

SaaS

Document Management Integration Service for SAP

The screenshot shows the Azure Marketplace page for 'Arcana Document Server for SAP'. The page includes a navigation bar with the Microsoft logo, 'Azure Marketplace', and a search bar. The main content area features the product logo, name, and provider 'arcana solutions GmbH'. It offers tabs for 'Overview', 'Plans + Pricing', and 'Ratings + reviews'. A 'Get It Now' button is prominently displayed. Below this, there is a 'Pricing information' section stating 'Starting at \$290.00/one-time payment for 1 month'. The 'Categories' section lists 'IT & Management Tools'. A 'Support' section includes 'Support' and 'Help'. A 'Legal' section mentions 'Under Microsoft Standard Contract' and 'Privacy Policy'. The main description states: 'Document Management Integration Service for SAP. Arcana Documentserver CMIS is a well designed cloud native document management solution following the CMIS 1.1 standard. Its integration into the SAP Business Technology Platform as a backend service makes it a perfect choice for managing business documents for SAP S/4HANA Cloud or On Premise systems. The solution offers all of the essential structural objects and document management capabilities like: secondary type management, versioning, legal holds, multifiling, various object operations like move, copy, update properties etc., content operations append, set, replace, supports documents, folders, items and relations, and many more ... Overall, Arcana Documentserver CMIS is a feature-rich, flexible, and secure document management solution that meets the needs of organizations of all sizes. The use of Azure Cloud technologies and services offers several options regarding scalability, redundancy and security, depending on your specific demands. Learn more: arcana sap integration'. On the right side, there is a user profile for 'Bernhard Morell' with the email 'bernhard.morell@gsd-consulting.net' and a 'Sign Out' button. Below the profile is a diagram showing the integration of Arcana Document Server CMIS with SAP S/4 Hana Public Cloud and SAP S/4 Hana via SAP BTP (Business Technology Platform) Repository Integration Option.

Legally compliant archive in the cloud

- Legal compliance is achieved through technical measures (for example by hash value creation and hash matching across the entire document flow).
- The Azure Blob Storage is certified by many compliance bodies (see [Azure Storage compliance offers | Microsoft Learn](#)), all current standards are observed.
- An attestation of the solution by a compliance officer in the customers environment (tenant) is necessary if full legal compliance is required.

Migration of existing archives

- Migration tools for migration of existing archives are available.
- Migration takes place on the application side via application interfaces (here e.g., ArchiveLink to CMIS)
- All document copies and verification steps during the document migration are fully logged in a compliance log file.

Discussion
